Quiz #14

Box spreads. Ratio spreads.

Problem 14.1. (2 points) A **box** spread is a replicating portfolio for a bond. *True or false?*

Problem 14.2. (2 points) The payoff function of a ratio spread is never bounded from above. *True or false?*

Problem 14.3. (2 points)

The following is a replicating portfolio for a *ratio spread*:

Long a two-year European call and write a three-year European call with the same strike price and the same underlying asset.

True or false?

Problem 14.4. (2 points)

You long a (90, 100, 110)–butterfly spread with one long \$90–strike call. Then, you short one \$110–strike European call with the same exercise date and underlying asset. The portfolio you end up with is equivalent to a ratio spread. *True or false?*

Problem 14.5. (2 points) An investor wants to speculate on **low** volatility combined with a higher likelihood of lower than higher prices. Then, he should long a ratio spread with fewer calls of the lower strike.

True or false?

Problem 14.6. (5 points)

Consider a continuous-dividend-paying stock whose current price is \$50 and whose dividend yield is 0.01. The continuously compounded, risk-free interest rate is 0.05.

Consider a portfolio consisting of:

- (1) a (45, 60) call bull spread, and
- (2) a (45, 60) put bear spread.

All the options are European with exercise date in one year. What is the price of the above portfolio?

- (a) \$13.97
- (b) \$14.13
- (c) \$14.27
- (d) \$14.41
- (e) None of the above.
