	Population	One Simple Random	All Simple Random Samples of size n
		Sample $y_1, y_2, \dots, y_n$ of	
		size n	
Associated	Y	Y	$\overline{Y}_n$
Random			
Variable			The population for $\overline{Y}_n$ is all simple random
			samples of size n from Y. The value of $\overline{Y}_n$ for
			a particular simple random sample is the
			sample mean $\overline{y}$ for that sample.
Associated	Y has a normal	The sample is <i>from</i> the	The distribution of $\overline{Y}_{n}$ is called the <i>Sampling</i>
Distribution	distribution.	(normal) distribution of	<i>Distribution</i> . The theorem tells us that the
		Υ.	sampling distribution is normal.
Associated	Population mean	Sample mean	Since it's a random variable, $\overline{Y}_n$ also has a
Mean(s)	$\mu$ , also called		mean. $E(\overline{Y}_n)$ . The theorem tells us that $E(\overline{Y}_n)$
	E(Y), or the	$y = (y_1 + y_2 + + y_n)/n$	$=\mu$ . (In other words, the random variables Y
	expected value		and $\overline{\mathbf{Y}}_{n}$ have the same mean $-\mathbf{i} \in E(\overline{Y}_{n}) =$
	of Y, or the	It s an estimate of $\mu$ .	$E(Y) = \mu_{0}$
	expectation of Y	~	
Associated	Population	Sample standard	Sampling distribution standard deviation.
Standard	standard	deviation	The theorem tells us that the standard
Deviation	deviation $\sigma$	$\mathbf{s} = \left[\frac{1}{2}\sum_{n=1}^{n}(\overline{\mathbf{r}} - \mathbf{r}_{n})^{2}\right]$	deviation of the sampling standard deviation
		$\int n - 1 \sum_{i=1}^{n} n - 1 \sum_$	is $\frac{\sigma}{\sqrt{n}}$ .
		s is an <u>estimate</u> of the	
		population standard	
		deviation $\sigma$
