

REVIEW EXERCISES

pp. 851 – 865 of *Statistics: Data and Models* contain review exercises covering material from the entire book. Below I have listed (with some comments) those that seem to be suitable for the content of M358K.

Odd Numbered Exercises:

#1, 7 (with the caution that it involves multiple inference), 13 (Note that it is continued on p. 854), 19 (especially recommended), 21, 23, 25, 33, 37 (particularly nice), 39, 43 (nice for fitting the method to the question, but note that if all questions are addressed, multiple inference needs to be taken into account)

Odd Numbered Exercises:

#4 (with the caution that it involves multiple inference), 12, 14 (parts (a) – (f) *only*), 18, 20 (with the caution that it involves multiple inference), 24, 34 (Note: The answer provided to (h) seems pretty iffy to me.), 38, 42, 44 (Part (c) is especially nice.)

Note: I also have some review exercises I have used for the course; if you are teaching this or a similar course, email me if you would like a copy.
